

Your vehicles may stop work for many reasons,
but a puncture need not be one of them!

There are few environments as tough,
demanding or critical as open cast and
underground mining. Add Seal is proven
in these harshest of conditions, ensuring
continuity of production, manufacture and
construction for satisfied clients in many
industrial sectors.

Keeps vehicles performing
off road...

...absolutely essential for
long haul

The product

Add Seal comprises of a carefully formulated blend of natural fibres, blocking agents and sealing compounds proven to seal a puncture of up to 18mm. Used as a preventative measure for a wide a range of vehicles and different tyre sizes from 26 horse power UTVs to 36 ton articulated dump trucks and earthmovers.

- ✓ The world's only environmentally responsible tyre sealant
- ✓ Seals holes caused by any puncturing object within the tread area
- ✓ Works immediately and repeatedly for multiple puncture protection
- ✓ Avoids the need to change the tyre on site and saves money
- ✓ Removes the risk and saves on recovery, repair and replacement costs
- ✓ Easy, quick and inexpensive to install with minimal loss of tyre pressure
- ✓ No damage to the wheel or tyre allowing easy re-treading or replacement

Add Seal is recommended for use in both tubeless and tubed tyres. Where inner tubes are fitted best results are gained with good quality tubes being the correct size and pressure for the tyre.

Why seal?

- ✓ Seals punctures as they happen
- ✓ Eliminates disruptive punctures on site
- ✓ Reduces onsite repair and replacement costs
- ✓ Improves productivity and revenues
- ✓ Keeps your vehicles and human resources working

Who uses it?

Transport managers, owner-managers and site managers the world-over realise the disruption and delays a puncture can cause and this is exaggerated when vehicles and teams of workers are working in a co-dependent manner. Add Seal is suitable for any type of pneumatic tyre from the humble wheel barrow to the biggest earth moving machine.
